Plant Care

Sunlight

The Philodendron Red Congo thrives in medium to bright indirect light, avoiding direct sunlight as it can cause leaf burn.

Water

Water the plant when the top inch of soil feels dry, ensuring that it never sits in standing water to prevent root rot.

Soil

Use a well-draining potting mix with a blend of peat, perlite, and orchid bark for optimal growth.

Repotting

Repot the plant every two to three years or when it becomes root-bound, using a container that is one size larger than the previous one.

Common problems and remedies

Yellow leaves

Overwatering can cause yellow leaves. Reduce watering frequency and ensure proper drainage.

Brown leaf tips

This may indicate low humidity. Increase humidity by placing the plant on a tray of water and pebbles, or using a humidifier.

Pests

Mealybugs and spider mites can be treated with insecticidal soap or neem oil.
